CHRISTEYE

CREATION COMPANIONS INITIATIVE

PROPOSAL TO THE PRESIDENT OF THE UNITED STATES

The ChristEye Biohybrid & Blockchain Research Pilot

To: President Donald J. Trump | From: We Develop Software LLC

Missouri registration: LC1064140 | Representative: Bradley Gearon

1 EXECUTIVE REQUEST

We Develop Software LLC respectfully requests White House consideration of a voluntary, privately led pilot exploring original digital companion creatures, blockchain-authenticated records of creation and care, and independently reviewed tissue-engineering and biohybrid-computing research. We invite presidential leadership in convening suitable federal scientific and small-business programs to assess technical feasibility, ethics, and public value.

2 THE PRODUCT VISION

Create an original family of collectible elemental companions that people can raise, customize, converse with, and evolve in a digital home. Each companion receives a unique digital identity and a transparent, owner-authorized record of growth, care milestones, and artistic evolution. ChristEye is the proposed adaptive computing interface, initially software-based; future neuron-based hardware is a distinct research objective.

COVENANT OF CARE - A VOLUNTARY DIGITAL ATTESTATION

A creator signs a pledge to protect life, treat others lovingly, and preserve accurate records. Its document hash and signature can be registered on a blockchain. This establishes a verifiable record, not a supernatural law or a claim about divine authority.

3 THREE-STAGE DEVELOPMENT PLAN

PHASE 1 - Digital launch: Original creature art, companion software, optional ERC-721 collectibles, signed care pledges, and a public audit trail of digital evolution.
PHASE 2 - Research collaboration: Evaluate non-animal tissue-engineering demonstrations using ethically sourced cells and laboratory oversight; record independently verified results without publishing private genetic data.
PHASE 3 - ChristEye feasibility: Explore carefully supervised neural-electronic interfaces, energy use, adaptability, and safe integration with a software companion. No claim of consciousness, soul attachment, or biological creature creation is assumed.

4 PUBLIC VALUE

Potential outcomes include educational digital companions, verifiable research provenance, new tools for ethical biological science, opportunities for U.S. small-business innovation, and public participation without mandatory religious affiliation or cryptocurrency purchases.

IMPLEMENTATION, OVERSIGHT & LEGAL SCOPE

5 AUTHENTICATION PROTOCOL

Publish a dated version of the project charter and associated media. Generate a SHA-256 content hash; sign the hash with a project-controlled cryptographic wallet; record the signature and hash reference on-chain. For optional creature collectibles, issue a unique token and define its rights and metadata in clear written terms. Store media and detailed research records off-chain; make public only appropriate hashes and non-sensitive milestones.

6 SCIENTIFIC & ETHICAL GUARDRAILS

Growing tissue requires appropriate cell sources, nutrients, oxygen, scaffolds, laboratory controls, and validation. A neuron interface has no demonstrated capacity to attach a soul or spirit to a creature. The project will not sell living animals, human tissue, or biological personhood through NFTs. Research involving human cells, engineered organisms, or animals will undergo the applicable institutional review, biosafety, consent, and welfare processes before work begins.

7 INTELLECTUAL PROPERTY AND CONSUMER PROTECTION

Blockchain records can help document dates, signatures, and token history, but they do not confer patent rights. Any patentable technical details should receive a separate intellectual-property review before public disclosure. NFT owners receive only rights explicitly described in the license; an NFT is not ownership of a soul, DNA, biological being, or unlicensed copyrighted work. No promised investment appreciation or unverified medical benefits.

8 REQUESTED FEDERAL ROLE

We request non-exclusive referral or convening assistance to evaluate eligibility for competitively awarded small-business R&D programs, technical collaborators, and independent bioethics review. The pilot should have publishable milestones, objective pass/fail measurements, and clear oversight. This proposal does not assert an existing government partnership, approval, or endorsement.

FOUNDER'S VISION

ChristEye is inspired by Christian teachings of love, creativity, responsibility, and care for life. The Covenant of Care is a voluntary human promise expressing those values; it does not purport to bind Jesus Christ or to prove spiritual phenomena.

Respectfully submitted,

Bradley Gearon
